

Experiment: Create Storyboards Using Balsamiq

Name: MUKILRAJ S

Roll.no: 240701341

Aim

To design and represent the **user flow of a mobile application** using **Balsamiq Wireframes** by creating storyboard screens.

Procedure

1. Open Balsamiq Wireframes
2. Create a new project (Mockup)
3. Design the **Home Screen** using UI elements
4. Create **Category Screen** (e.g., Fruits)
5. Design **Product Detail Screen**
6. Add navigation elements (buttons, icons)
7. Link screens to show user flow
8. Add annotations using sticky notes
9. Save the storyboard

Steps (Detailed Design)

Step 1: Home Screen

- Add title → “Groceries”
- Add search bar
- Add item grid (Rice, Egg, Milk...)
- Add bottom navigation

Step 2: Category Screen

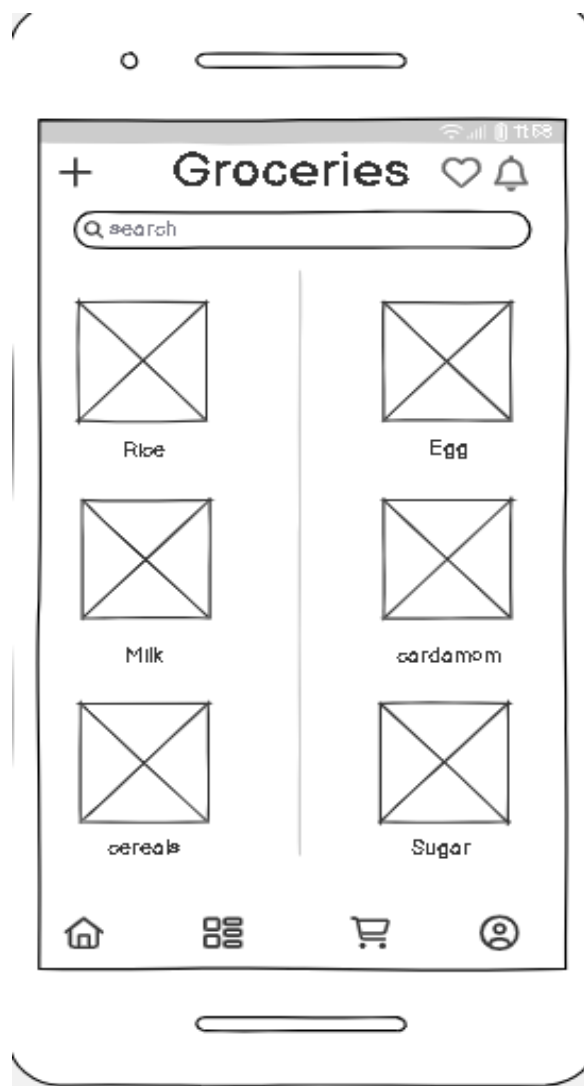

- Add back button
- Add search bar (Fruits)
- Add fruit items (Apple, Orange...)

Step 3: Product Screen

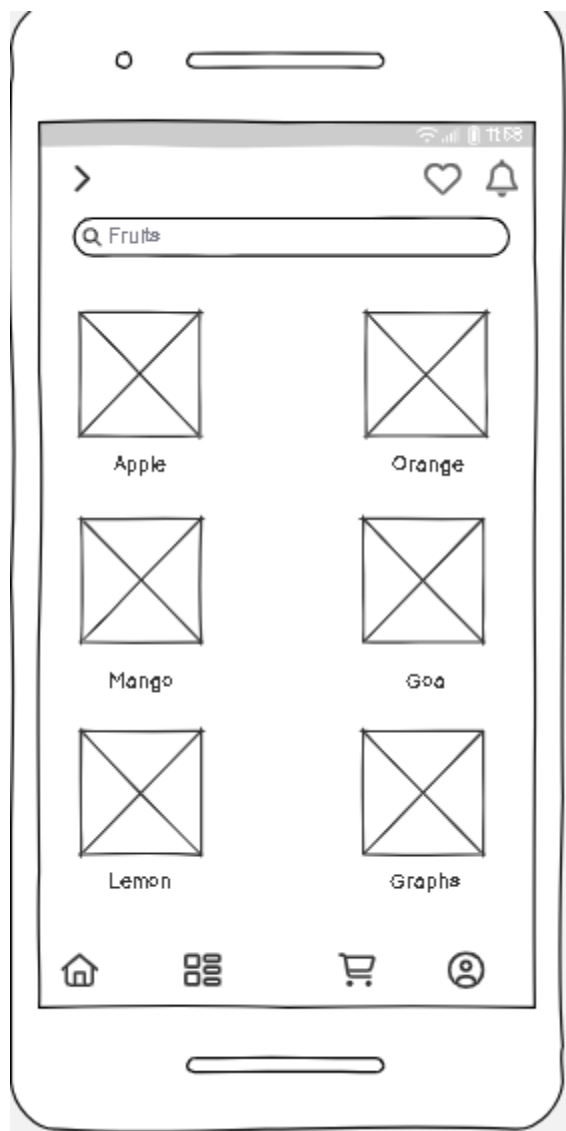

- Add product image
- Add product name → Orange
- Add price → \$25
- Add quantity selector
- Add “Add to Cart” button

Step 4: Linking

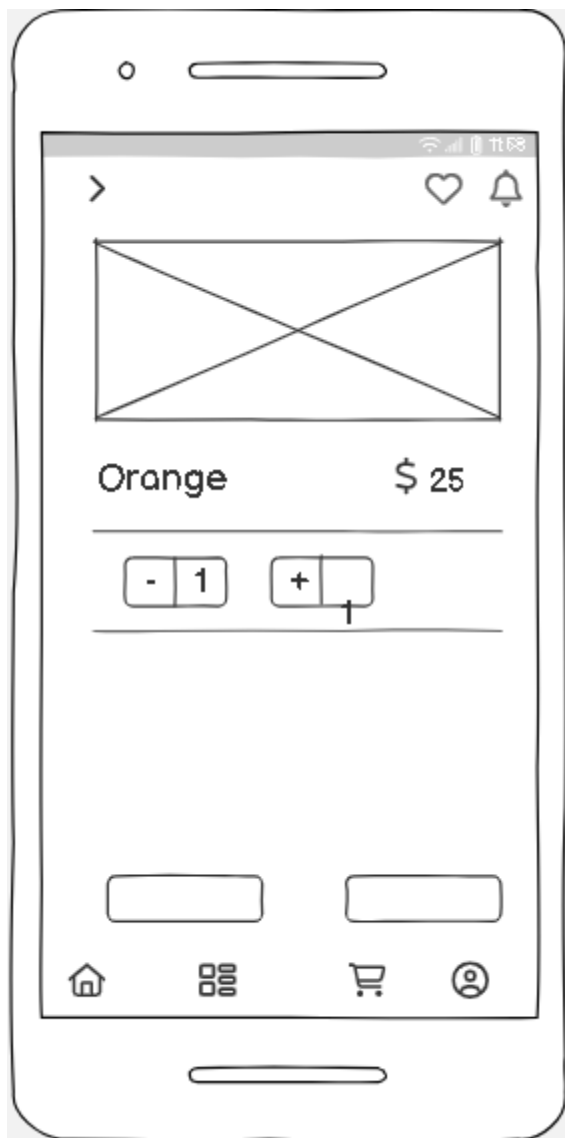

- Link Home → Category
 - Link Category → Product
- Screen 1 – Home

Screen 2 – Category (Fruits)

Screen 3 – Product Details

User Flow Diagram

Home Screen → Category Screen → Product Screen → Add to Cart

Example Output

- A complete storyboard with:
 - 3 mobile screens

- Connected user flow
- UI elements (buttons, search bar, images)
- Navigation between screens

\Output clearly shows how user moves from:

Opening app → Selecting item → Adding to cart

Result

Thus, the storyboard representing the user flow of a mobile grocery app was successfully created using Balsamiq.
