

UID EX 9

AIM:

The aim is to design input forms that validate data, such as email and phone number, and display error messages using HTML/CSS and JavaScript with Validator.js

PROCEDURE:

Step 1:

Setting Up the HTML Form Start by creating an HTML form with input fields for the email and phone number.<!DOCTYPE html>

```
<<!DOCTYPE html>

<html>

<head>

<title>Form Validation</title>

<link rel="stylesheet" href="style.css">

</head>

<body>

<div class="container">

<form id="form">

<label>Email:</label>

<input type="text" id="email">

<span id="emailError" class="error"></span>

<label>Phone:</label>

<input type="text" id="phone">

<span id="phoneError" class="error"></span>
```

```
<button type="submit">Submit</button>

</form>

</div>

<script src="script.js"></script>

</body>

</html>
```

Step 2:

Styling the Form with CSS Next, add some basic styling to make the form look nice.

```
body {
  font-family: Arial;
  background-color: #f0f0f0;
}

.container {
  width: 300px;
  margin: auto;
  padding: 20px;
  background: white;
  border-radius: 5px;
}

input {
  width: 100%;
  padding: 8px;
  margin: 5px 0;
}

button {
  background: green;
  color: white;
  padding: 10px;
  border: none;
}

.error {
```

```
    color: red;
    font-size: 14px;
}
```

Step 3:

Adding JavaScript for Validation Finally, add JavaScript to validate the input fields using Validator.js and display error messages

```
document.getElementById("form").addEventListener("submit",
function(e) {

    e.preventDefault();

    let email = document.getElementById("email").value;
    let phone = document.getElementById("phone").value;

    let emailError = document.getElementById("emailError");
    let phoneError = document.getElementById("phoneError");

    emailError.textContent = "";
    phoneError.textContent = "";

    let emailPattern =
/^([a-zA-Z0-9._%+-]+@[a-zA-Z0-9.-]+\.[a-z]{2,})$/;

    let phonePattern = /^[6-9][0-9]{9}$/;

    if (!emailPattern.test(email)) {

        emailError.textContent = "Enter valid email";
    }

    if (!phonePattern.test(phone)) {

        phoneError.textContent = "Enter valid phone number";
    }

})
```

```
        if (emailPattern.test(email) && phonePattern.test(phone)) {  
            alert("Form Submitted Successfully");  
        }  
  
    });
```

OUTPUT

The screenshot shows a web form with a light gray background. The form is a white rounded rectangle containing two input fields and a submit button. The first input field is labeled "Email:" and the second is labeled "Phone:". Both labels are in bold black text. The input fields are empty text boxes. Below the input fields is a green rectangular button with the word "Submit" in white text.
