

EXPERIMENT – 1

GOOD UI AND BAD UI

Bad UI Design

Visual Hierarchy

- All elements look similar, so nothing stands out.
- Users must read everything instead of scanning quickly.

Icons & Recognition

- No icons are used, increasing cognitive load.
- Text-only navigation slows down decision-making.

Grouping & Structure

- Sections are weakly grouped and not clearly labeled.
- Users may struggle to understand category boundaries.

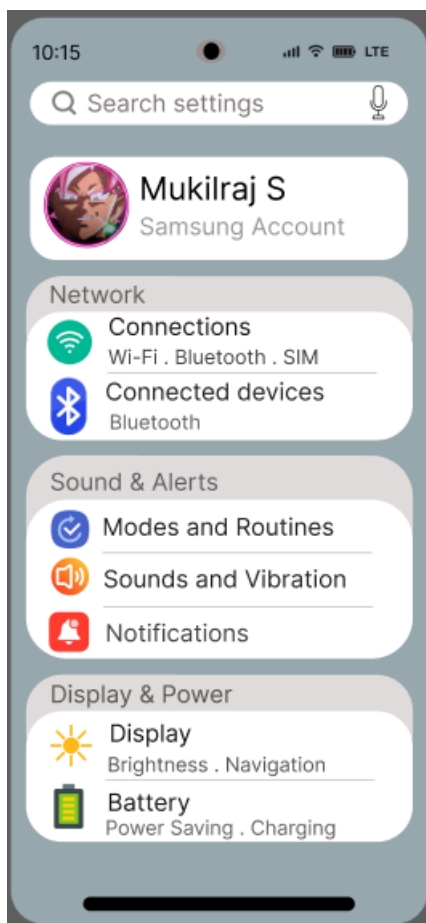

Readability

- Low contrast and muted colors reduce clarity.
- Text blends into the background too much.

Interactivity Clarity

- Buttons and list items don't look tappable.
- Lack of visual feedback reduces user confidence.

Good UI Design

Visual Hierarchy

- Clear section headers guide the user's attention.
- Important items are easier to spot at a glance.

Icons & Recognition

- Icons help users recognize options instantly.
- Reduces the need to read every label.

Grouping & Structure

- Related settings are grouped into clear sections.
- Improves navigation and mental mapping.

Readability

- Better contrast improves text legibility.
- Clean spacing makes scanning effortless.

Interactivity Clarity

- Rows clearly appear tappable.
- Design encourages confident user interaction.
